EDUCATION

Bennett University (Times Group of India) <i>Bachelor of Technology - Computer Science;</i>	Greater Noida, Uttar Pradesh, India <i>Sep 2022 - May 2026</i>
---	---

SKILLS SUMMARY

Languages: Python, Java, C++, SQL, HTML/CSS, JavaScript
AI/ML: Machine Learning, Deep Learning, Computer Vision, Prompt Engineering, Generative AI, Large Language Models(LLMs), Retrieval Augmented Generation(RAG), Agentic AI
Frameworks and Libraries: FastAPI, Streamlit, Tensorflow, PyTorch, Pandas, NumPy, Scikit-Learn, Matplotlib, HuggingFace Transformers, LangChain, LangGraph
Tools: Git, Docker

EXPERIENCE

InvoLead <i>Data Science/Generative AI Intern</i>	on-site <i>Nov 2025 - Apr 2026</i>
- Architected and shipped a production-grade, async FastAPI service for a client using LangChain, LangGraph and OpenAI APIs. Built stateful agentic RAG pipelines with Qdrant as vector DB for content retrieval and implemented streaming responses with low-latency, concurrent-safe request handling. - Designed an internal drug-safety dashboard after data processing powered by agentic AI pipeline. - Authored typed, async Python throughout, structured with dependency injection, error handling, and test coverage including adversarial edge-case suites.	
Vayuxi <i>AI/ML Intern</i>	remote <i>Oct 2025 - Nov 2025</i>
Built real-time OpenCV-based pipe measurement detection and OCR pipelines for structured data extraction from work-order documents and integrated a speech-to-text pipeline for real-time mobile voice input groundwork for conversational voice agent features.	
Indian Oil Corporation Limited <i>Summer Intern</i>	on-site <i>Jun 2024 - Jul 2024</i>
- Automated excel reporting process for aviation fuel stock data by extracting and analyzing records from SAP APIs. - Developed a web-based dashboard with filter, search and download features to visualize key trends and support data-driven decision-making. This reduced manual effort by approximately 70%.	

PROJECTS

Poly-Cystic Ovary Syndrome(PCOS) detection and diagnosis <i>Python, HTML/CSS, Javascript, Tensorflow, OpenCV</i>	Apr 2024
Developed a deep learning based web-application for PCOS detection in women by applying deep learning models and Explainable AI on ultrasound reports achieving an accuracy of 99.79%.	
Earthquake magnitude prediction <i>Python, NumPy, Pandas, Scikit-Learn, Matplotlib, Seaborn, Plotly Express</i>	Dec 2023
Performed exploratory and predictive data analysis on earthquake dataset using tree based and boosting algorithms. It predicted magnitude with an accuracy of 99.89% through Random Forest Classifier. Deployed using Streamlit.	
Instagram image caption generator <i>Python, Tensorflow</i>	May 2025
Generated captions for instagram images Using CNN-RNN architecture with Attention mechanism and evaluated output quality rigorously using BLEU scores directly analogous to LLM-as-judge eval methodology.	

PUBLICATIONS

Polycystic Ovary Syndrome (PCOS) detection using Deep Learning and Explainable AI <i>Research Paper</i> [https://ieeexplore.ieee.org/abstract/document/11430323]	Mar 2026
Presented at ACET-2025 and published by IEEE	
Earthquake magnitude prediction using machine learning <i>Research Paper</i> [https://link.springer.com/chapter/10.1007/978-981-96-4319-6_4]	Oct 2025
Presented at ICAIN-2024 and published under Springer series	
Generalized framework using Federated Learning for brain tumor detection from medical images <i>Research Paper</i> [https://ieeexplore.ieee.org/document/10932596]	Mar 2025
Presented at CICTN-2025 conference and published by IEEE	

HONORS AND AWARDS

Best Paper Award	Feb 2025
Got this award for the research paper titled "Generalized framework using Federated Learning for brain tumor detection from medical images" presented at CICTN-2025 and published by IEEE.	

CERTIFICATIONS

NVIDIA – Fundamentals of deep learning [https://learn.nvidia.com/certificates?id=e60VcOI6S3SII2tOqKJ_hQ]	Apr 2025
